

GLOBO TV NETWORK
“Memory of Creation” Project
Developed with LAB245 Software
In conjunction with the Folder245ContentManagement System
WINNER OF THE “Document Imaging” AWARD
In the area of Eletronic Document Management
– Eletronic Document Management

Characteristics of the Project:

The Memory Project with a Eletronic Document Management system handles 400 technical drawing boards per month; 400 costume design projects; 350 computer graphic files; 100 new locations; as well as 2,200 pages of text and other references. Owing to this system, it has been possible to structure the data with online access, thus avoiding work redundancy.

The system features in-depth details (a true innovation in Brazil), which aims at preserving the knowledge amassed through research and projects designed by visual directors, stage directors, costume designers, special effects technicians, makeup artists, lighting directors as well as location producers with a view to creating specific environments.

Person In Charge of Project: Cecília Barreira e Castro
